WORK EXPERIENCE

*MIT Lincoln
Laboratory*

2012–Present Technical Staff, MIT LINCOLN LABORATORY

- Led multiple engineering teams developing algorithms for radar signal processing, multisensor-multitarget tracking, mission planning, and target classification
- Transitioned several solutions to government/contractor teams and fostered successful implementation into fielded systems
- Composed and delivered presentations and reports regularly to give progress updates, summarize work, and exhibit results
- Presented routinely to sponsors and management at all different technical levels, i.e., low-level to executive-level program managers
- Coordinated and led development for open source tools to aide in the simulation, evaluation, and design of algorithms in the field of adaptive sensing
- Oversaw data engineering effort for the consolidation and organization of large stores of diverse historical data to aide in the development and test of artificial intelligence algorithms

Purdue University

2011–2012 Research Assistant, PURDUE UNIVERSITY — West Lafayette

- Investigated the incorporation of noisy feedback information in physical-layer communications and proved its tangible utility
- Composed multiple technical articles in the area of feedback communications
- Collaborated with several other research assistants on theoretical development, testing, and technical documentation
- Studied the area of radar waveform design for imaging purposes and composed two conference papers on the subject

Reference: David LOVE · (765) 981 0779 · djlove@purdue.edu

*MIT Lincoln
Laboratory*

Fall 2011 Student Intern, MIT LINCOLN LABORATORY

- Completed two studies on the optimal use of radar resources for the purposes of searching/tracking and the application of compressive sensing techniques to radar imaging
- Wrote technical articles for each corresponding project
- Constructed and presented final reports on the work

Reference: Sung-Hyun SON · (781) 981 7307 · sson@ll.mit.edu

*Naval Research
Laboratory*

Spring 2011 Student Intern, NAVAL RESEARCH LABORATORY — Washington, D.C.

- Formulated the framework for the optimization of radar waveforms with the goal of imaging
- Built appropriate simulation environment to demonstrate the benefits of waveform optimization
- Composed a technical article and presented final report on the subject

EDUCATION

<i>Doctor of Philosophy</i>	2007-2012	Purdue University, West Lafayette
	GPA: 3.91 · School of Electrical and Computer Engineering Area of Concentration: <i>Communications and Signal Processing</i> Thesis: <i>Harnessing the Benefits of Noisy Feedback</i> Advisor: Prof. David J. LOVE	
<i>Bachelor of Science</i>	2003-2007	Purdue University, West Lafayette
	GPA: 3.92 · School of Electrical and Computer Engineering
